

BELT GRINDER & JOMINY END QUENCH APPARATUS

Description :

Vaiseshika has designed and manufactured good quality Belt Grinder/Polisher for initial rough grinding of metallurgical specimen. The Grinder is a rigid construction with completely enclosed body for easy operations. Machine base has full cover mask and dynamically well balanced rollers.

BELT GRINDER : 7001BG

7001BG

Specification

| |
|--|
| Working on 220V in single phase operation |
| Manual Belt - 100/915 mm |
| Balanced pulleys |
| Polishing Motor Power 1/2 H.P. Single/Single Phase |

Application Areas :

| |
|--------------------------|
| Metallurgical Laboratory |
| Forging Industry |
| Fasteners Industry |
| Casting Industry |
| Iron & Steel Industry |
| Auto Parts Ancillaries |

JOMINY END QUENCH APPARATUS : 7001JQ

Note :
Muffle Furnace can also be provided with Jominy End Quench Apparatus (Optional)

7001JQ

Vaiseshika Jominy Apparatus is designed for determining the Hardenability of steel by an experiment called Quench Test. This experiment will enable the student to know about the Hardenability characteristics of different alloying elements.
